Collision sweep, 2026-11-13: what to look at. Red: ink in common; orange: nearer than 20 units across.

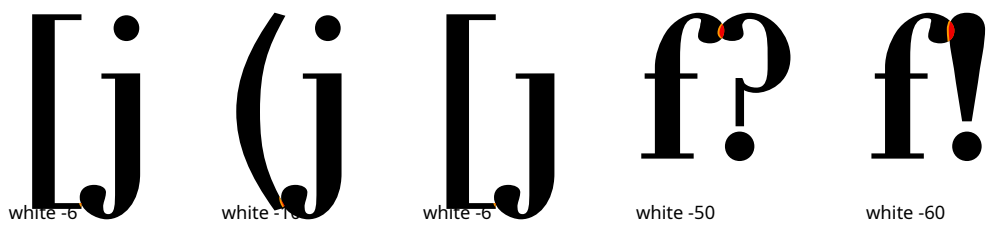

1. Italic [j: a collision?

The renderings of 9 Nov called it one; across, it keeps 56 (Bold Italic 64) units, so the sweep does not list it.
j's ball comes near the bracket's foot on the diagonal, which the measure across leaves out. Regular and Bold beside it, both listed.
Decide: fine as it is | to be kerned looser (then the sweep needs a diagonal measure).

2. Italic „ before a slanted foot (799 pairs in the Italic, 812 in the Bold Italic)

Each pair as set, then beside it as kern_clear would loosen it (20 units of white across).
Decide: loosen by kern_clear (as shown) | a narrower or differently placed „ in the italics | kern by hand to an optical value.

3. The redrawn italic f against (and [(new since F7's batch)

Today, then before the redraw (11 Nov, 30f20e1a), where both were clear.
Decide: loosen by kern_clear | change the f's descender.
